

Example of a Learner Journey

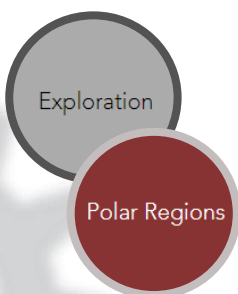

I've achieved my Bronze Global STEM Award with these two projects:

First of all I did a project where we found out where our water comes from and where our poo goes. We put together a wall display with pictures of all our houses and where we think the pipes run. I then found out the people that design and build the pipes, the engineers, and I wrote about what I think they need to be good at.

Based on the 'Sewage Systems' project sheet

For my next project, we had to investigate the best material to make an explorers coat from to keep them warm, dry and comfortable. The explorer was going to the Arctic and she was researching the polar bears to see how they live. I designed my coat and chose the best material. I didn't have time to make it but I did all the drawings so you can see how it works. I found out that she had a degree in conservation and biology and she was a scientist.
